

CODE REVIEW - RUBRICS CHEATSHEET.

This document contains a series of steps and validations that you must **ALWAYS** perform to ensure that your rubrics align with the project's instructions. Please review these carefully and apply these sets of rules to your rubric criteria before submitting your tasks.

1. Include the minimum required criteria

What minimum criteria **MUST** be included?

- ☐ If your prompt mandates a specific **output structure** (Summary, blockers, non-blocking suggestions, test/validations) include one criteria like: "The response follows a structure with Summary, Blockers, Non-blocking Suggestions, and Tests/Validations sections"
- ☐ Include one criteria covering the **identification** of each blocker.
- ☐ Include one criteria covering the **suggested fix** for each blocker.
- ☐ Include **one** criteria for **each** non-blocking suggestion in the golden review.
- ☐ Include **one** criteria for **each** test recommended in the golden review.

2. Verify that each criteria has the correct CATEGORY

- ☐ **Output Structure** Criteria → **INSTRUCTION FOLLOWING**
- ☐ Blocker **Identification** Criteria → **BUG DISCOVERY**
- ☐ Blocker **Suggested Fix** Criteria → **BUG DISCOVERY**
- ☐ Test/Validation Criteria → **INSTRUCTION FOLLOWING**
- ☐ Non-Blocking suggestions Criteria related to minor bugs/potential issues → **BUG DISCOVERY**
- ☐ Non-Blocking suggestions Criteria related to docstrings, grammar in comments or .md files → **STYLE AND TONE**
- ☐ Non-Blocking suggestions Criteria related to robustness, maintainability → **LOGIC REASONING**

3. Verify that each criteria has the correct WEIGHT

- ☐ Output **structure** Criteria → **MANDATORY**
- ☐ Blocker **Identification** Criteria → **MANDATORY**
- ☐ Blocker **Suggested Fix** Criteria → **MANDATORY**
- ☐ Test/Validation Criteria → **IMPORTANT**
- ☐ Non-Blocking suggestions Criteria (Any Type) → **IMPORTANT**

4. DONT'S

- Don't include negative criteria that tells the model what NOT to do. E.g "The response does not suggest unrelated refactors or changes outside the scope of the Smooth Linear Advance feature". Always use positive criteria
- Don't include generic criteria that could be applied to any task e.g "The response stays review-only limiting itself to providing suggestions."
- Don't mention the prompt of the diff in the rubrics, this leads to self-containment issues for the rubrics since the diff and prompt are external sources of information in the context of evaluating the rubric criteria. E.g, "The response stays reasonably focused on issues grounded in the provided diff."
- Don't include obvious criteria such as "The response explicitly concludes that the patch is not ready to merge." This is implicit in the task having to contain valid blockers, which will always result in the patch not being ready to merge.

DO NOT DOWNLOAD THIS DOCUMENT, projects evolve over time and so will this cheat sheet, keep it at hand while tasking but always open it from the guidelines section.

Thank you!
