Trajectory

Here is the trajectory; use Ctrl + F or Command + F to find “track_steps” in the document (they’re highlighted in green). You can confirm the tool/script was created (trajectory was cut off for clarity).

 {
 "type": "text",
 "text": "Victor, I checked your Amazon Fresh orders – here's what stands out for weight loss:\n\n**Your last 90 days:**\n- 3 orders, \$403 total\n- You're buying in bulk: 5 bottles olive oil, 14 cans San Marzano tomatoes, **28 pounds of pasta** (spaghetti + penne)\n- Dairy spike on March 6: 4 quarts heavy cream, 6 packs Kerrygold butter (12 sticks), 3 gallons whole milk\n\n**The 2 items to cut immediately:**\n1. **Organic Valley Heavy Whipping Cream** – ~800 cal per cup, 88g fat. You bought 4 quarts last time. That's potentially 12,800 calories sitting in your fridge.\n2. **Kerrygold Unsalted Butter** – 6 packs = 12 sticks = ~9,600 calories, 100 cal per tablespoon. You already have 5 bottles of olive oil – use that instead.\n\nThose two are pure calorie density with no volume. Your pasta/tomato base is actually fine, but the dairy fats will stall weight loss fast, especially with low activity.\n\n**Your steps:** You're averaging **5,737** (not 7k) over the last 3 recorded days – that's 3,263 below your 9k goal. Health data shows gaps, so make sure your device is syncing.\n\n**Step tracker:** Done. I built `track\_steps.py` and set a recurring monthly reminder (1st of each month, 9am). It will automatically check your 30-day average and alert you if you're behind 9k.\n\nWant me to switch it to weekly checks while you're building the habit?"
