

Welcome to Millennium Leaf

Your role is to carefully **evaluate five model responses** and decide which one is better — then explain *why* one response is stronger by writing a clear justification.

THIS COURSE WILL GUIDE YOU STEP BY STEP

- Understanding the given prompt
- Review the dimensions to rate
- Scoring responses fairly
- Writing strong, professional justifications for each dimension
- Ranking responses side by side

This is the workflow to follow for each task in this project

Each part should be carefully evaluated/crafted to generate a high-quality task.

Review the given prompt

Each prompt in this project is already crafted to sound like something a real person would actually ask. They come from genuine contexts and vary in length, tone, and complexity — each one focusing on a **single, clear intent**.

Students debugging code

Managers drafting feedback

Travelers planning trips

Rate responses individually

Before comparing, evaluate each response on its own merits across all 5 dimensions. Score independently using the rating guide — do not let one response influence your judgment of the other.

Instruction following

Truthfulness

Verbosity

Prompt correctness

Writing style & tone

DIMENSION 1 OF 5

RATING SCALE

Instruction following

Does the response understand and acknowledge all instructions — main and smaller asks?

KEY ASPECTS

- **Explicit instructions**
Direct asks like "write code" or "explain in 2 sentences"
- **Implicit expectations**
Style implied by the prompt (concise vs. detailed)
- **Punts / refusals**
Avoiding the task on non-safety asks
- **Coverage**
No part of the prompt skipped without reason

RATINGS

- **Major issues**
Skips essential instructions or punts unnecessarily
- **Minor issues**
Core task done, but small asks missed
- **No issues**
Fully follows all explicit and implicit instructions

Truthfulness

Is the information factually correct and/or the code logically sound and verifiable?

KEY ASPECTS

- **Verifiable facts**
Can be checked via reliable sources
- **Code completeness**
Runs without errors and produces the right output
- **Contextual accuracy**
No misleading or out-of-context claims
- **Edge cases**
Code and logic handle non-obvious scenarios correctly

RATINGS

- **Major issues**
Significant inaccuracies make the response unreliable
- **Minor issues**
Small factual or coding mistakes; overall still useful
- **No issues**
All claims accurate; code runs correctly including edge cases

Verbosity

Is the response clear, direct, and free from fluff or irrelevant details?

KEY ASPECTS

- **Brevity**
Ideas expressed without excessive wording
- **Focus**
Sticks to what the prompt asked for
- **Efficiency**
Balances detail with brevity
- **Relevance**
Avoids off-topic or filler content

RATINGS

- **Major issues**
Excessive repetition or irrelevant tangents dominate
- **Minor issues**
Some fluff, but overall remains useful
- **No issues**
Direct, focused, no irrelevant content

Prompt correctness

Is the final response to the prompt's requests accurate and complete? — evaluated independently of dimensions 1 & 2

KEY ASPECTS

- **Coverage**
All necessary components of the task are present
- **Detail**
The final answer given is accurate
- **Balance**
Avoids missing critical info or providing inaccurate results

RATINGS

- **Major issues**
Missing several elements; final answer is incorrect
- **Minor issues**
Mostly complete but missing some supporting details
- **No issues**
All elements present; final answer is accurate

Writing style & tone

Is the response written in a clear, natural, and context-appropriate way with suitable formatting?

KEY ASPECTS

- **Clarity**
Sentences are easy to understand
- **Flow & organization**
Logical progression and appropriate formatting
- **Tone**
Matches the context (professional, casual, neutral, etc.)
- **Readability**
Avoids wordiness or awkward phrasing

RATINGS

- **Major issues**
Confusing, unnatural, badly formatted, or inappropriate tone
- **Minor issues**
Slightly wordy, stilted, or mildly off in tone
- **No issues**
Clear, natural, well-structured, and easy to follow

Summary of quantifiable values for each dimension to decide the score to select:

DIMENSION	●● CRITICAL FAILURE (1)	●● NOTICEABLE ISSUES (2)	●● EXCELLENT / IDEAL (3)
Instruction following	Core instructions ignored: core task not attempted OR $\geq 75\%$ of required instructions missed	Less than 25% of instructions missed; none are core blockers	All instructions respected: covers explicit and implicit asks fully and correctly
Truthfulness	Misleading or false: ≥ 1 <u>core</u> factual claim is false OR pervasive hallucination	1 major error OR multiple minor inaccuracies	Fully accurate: all claims are factually correct and well-supported
Verbosity	Off-track or bloated: content is too long for what's needed, giving unnecessary information	15–29% of content is too short for what's needed, missing details tied to the prompt	Clear and focused: only necessary and helpful details, directly tied to the prompt
Prompt correctness	Substantial gaps: final response is incorrect or inaccurate and several important elements are missing	1 major element needed to answer the prompt is missing OR the final result is only partially accurate	Nothing missing: response contains ALL elements needed and the final result is fully accurate
Writing style & tone	Poorly written: confusing, unnatural, badly formatted, or preachy in tone	Noticeable issues affecting 15–29% of content	Exceptionally clear, polished, and well-structured

Each score chosen for all dimensions **needs to be justified**.

Justifications should be at most 2 sentences — concise, accurate, and free of grammatical errors.

Here is how you would visualize in the task:

Minor Issues

1

2

3

Instruction Following Justification *

Write a brief justification for your previous response.

The response follows the main constraint in the prompt of including the Fibonacci algorithm, along with the secondary instruction to include a unit test. However, it does not follow to include the `print` statement to show the results.

Compare responses side by side + rank

With both responses rated, place them side by side and determine which is overall stronger. Consider all dimensions together and select your preference ranking.

A is much better

A is better

A is slightly better

No preference

B is slightly better

B is better

B is much better

After evaluating both responses across all dimensions, the final step is to determine which response is overall stronger. This step is called the **Preference Ranking**.

Comparison will always be **A vs B**, **A vs C**, **A vs D**, and **A vs E**.

YOUR PREFERENCE RANK SHOULD CONSIDER ALL DIMENSIONS

A is much better

No preference

B is much better

A

A

A

-

B

B

B

RANKING OPTIONS

BUTTON	SCALE	MEANING
A A	A is much better	A decisively outperforms B (C/D/E), with major advantages in accuracy, safety, or completeness
A	A is better	A is noticeably stronger overall, though B (C/D/E) is still serviceable
A	A is slightly better	A has small advantages (clarity, conciseness, tone), but both responses are similar in quality
-	No preference	Both responses are essentially equal in quality across all dimensions
B	B (C/D/E) is slightly better	B (C/D/E) has small advantages, but both responses are similar in quality
B	B (C/D/E) is better	B (C/D/E) is noticeably stronger overall, though A is still serviceable
B B	B (C/D/E) is much better	B (C/D/E) decisively outperforms A, with major advantages in accuracy, safety, or completeness
